# ESCAPE to the Future

25-26 October 2022  
Brussels, Belgium

## The VRE for the EOSC Future Science Projects

Enrique Garcia on behalf of  
Alba Vendrell, Elena Gazzarrini, Agisilaos Kounelis,  
Domenic Gosein and Xavier Espinal

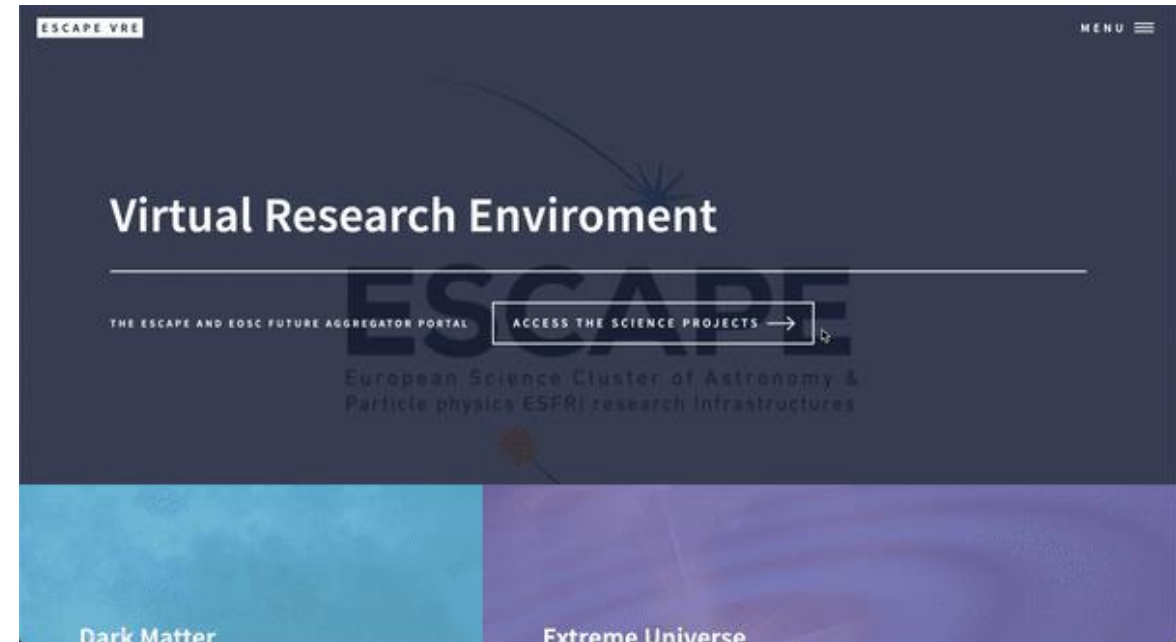

# The Virtual Research Environment - What is it?

The VRE is a **collaborative online platform** where researchers from the EOSC Future Science Projects (SPs) are able to **develop** and **share** end-to-end **analysis and workflows**, having access to all the digital content needed to produce a scientific result, in compliance with **FAIR** principles.

- **Single platform** where users can perform these tasks (analyse, preserve, (re)run, share...) as well as for **learning and outreach purposes**.
- During the last year, members from EU and DM SPs have been **actively using the platform** to run analysis and work on their research topics.
- Landing page containing project subjects and links to services and tools:

[escape2020.pages.in2p3.fr/virtual-environment/home/](https://escape2020.pages.in2p3.fr/virtual-environment/home/)

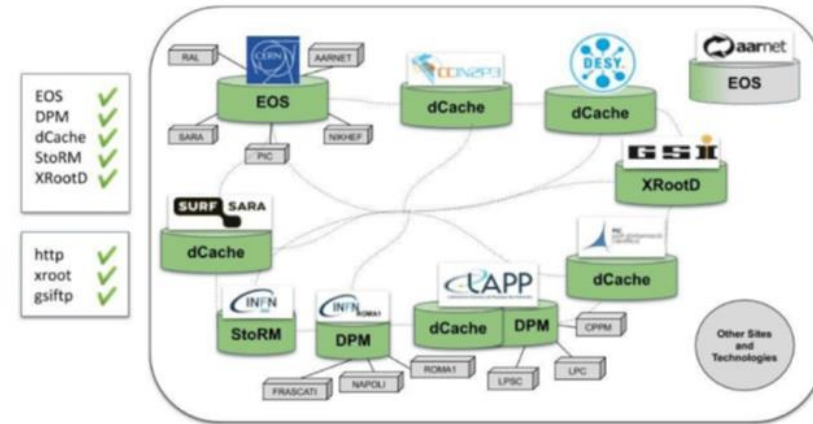

# The Virtual Research Environment - What is it?

# Current pieces of the Virtual Research Environment

## Data Lake infrastructure

- Distributed storage based on WLCG model
- Support for all data types
- Ensures data security, quality, access,
- Experiments *dump* data... scientists *fish* data
- Data access and transfer with gridFTP, HTTP(S), and xroot protocols

# Current pieces of the Virtual Research Environment

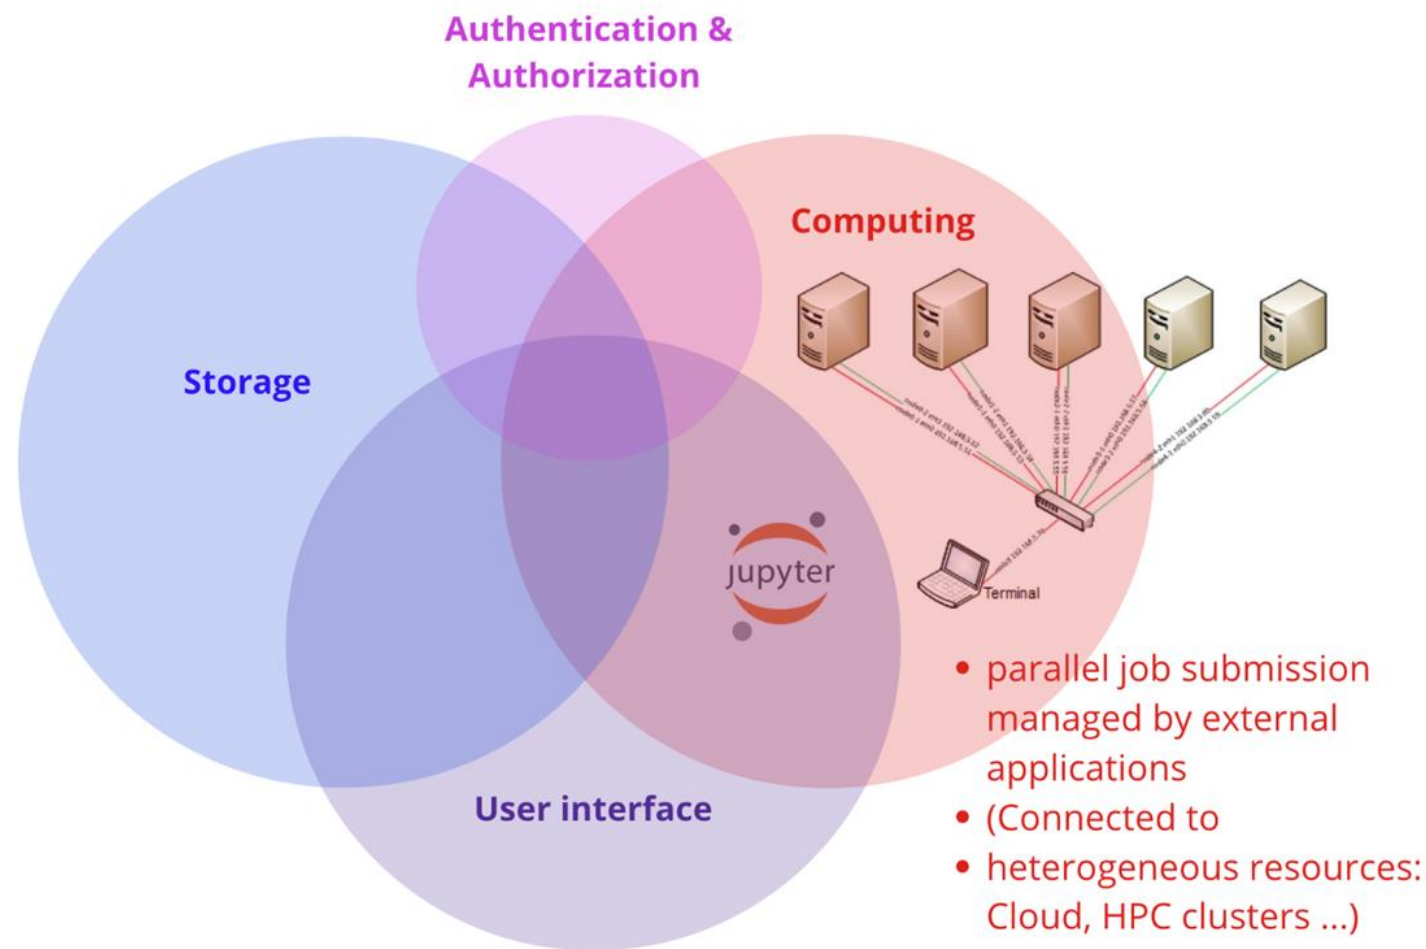

# Current pieces of the Virtual Research Environment

## DATA LAKE AS A SERVICE

- hides complexity of Data Lake - **scientists browse data**
- **Computing environment:**  
pre-installed software
- run preliminary analysis
- (send batch/parallel jobs to **compute cluster** - no need of local file copy)
