

EST data in the VO

- TAP Prototype : question on DACHS
 - Our features catalogs are changing very often. How to feed DACHS in these conditions ?
 - Answer : depends on the actual frequency of upgrade
 - Further discussions between Markus (GAVO) and Freek (ROB) to be organized*
 - KIS data looks very specific . Multidimensional ? Where do they fit ?
 - TimeFrequency map feature contour standard project by Baptiste
- UCD additions for solar data
 - FITS KEYWORDS ↔ Ucds . Seems to be straightforward. Use the standard UCD upgrade procedure. Additional EPN-TAP / Keywords mapping exercise to complete
 - UCD for feature catalogs. Needs wider discussion. Can involve ROB, VESPA, MEDOC, Solar Net, SVO people. To be organized under an IVOA hat (semantics WG / solar system IG?)
 - Voc 2.0 VEP procedure is not fully adapted to UCDs (thought for list of terms) but could be tuned to help for that.
